3. Research Priorities:

Sr. No.	Research Area	Aim	Objective	Benefits of Farmers
1	Molecular diagnostics & epidemiology of animal pathogens	Development of rapid and reliable alternative to conventional PCR for detection of various pathogens in clinical samples	To detect <i>pathogen</i> from the clinical samples employing Conventional PCR.  To develop test for rapid and sensitive detection of pathogen from clinical samples.  To study the comparison of the result with various test Sequencing and Phylogenetic analysis of field isolates.	Helpful for control Strategies
2	Antimicrobial Resistance of the Bacterial pathogen	India is a growing global economy with an increasing human population depending on the consumption of animal-origin products such as raw milk, meat and their products for	1.To study the prevalence of bacterial pathogen from bovine milk, chevon and poultry meat.  2.To amplify predominant antibiotic resistant genes from bacterial pathogen isolates by	The study will brought attention to the concerning prevalence of multidrug-resistant <i>bacteria</i> in foods of animal origin in Nagpur. Assessing antibiotic susceptibility

		<p>essential nutrients and overall good health. This situation leads to high demand for food of animal origin which further results in intensive animal production and processing of products, especially mass production, and movement of products globally. This period of time may give rise to faulty processing practices which increase the chances of contamination and spread of food-borne pathogens. The antibiotic-resistance genes present in these pathogenic organisms can be transmitted to humans through ingestion</p> <p>Hence, the increasing prevalence of enterotoxigenic</p>	<p>employing Polymerase Chain Reaction.</p> <p>3.To sequence the representative amplicons of predominant antibiotic resistance genes and analyze the relation with global bacterial pathogen isolates using bioinformatics tools.</p>	<p>with help of rapid and reliable techniques is essential for determining the appropriate course of therapy</p>

		strains of <i>S. aureus</i> poses a risk for food poisoning in the consumers of animal-origin food products. The emerging antibiotic resistance in food products infected by bacteria is also a public health issue. Resistance genes in food items caused by bacteria in Nagpur region . It becomes necessary to develop enhanced, rapid and sensitive diagnostic assays.
